

SUMMARY

Software developer with 2+ years at Aashman Technicals delivering production systems across mobile, web, and cloud. Shipped TRUUNA, a Flutter Android app live on the Google Play Store, backed by a Python FastAPI and PostgreSQL service running on Azure with CI/CD. Also delivered the company's React corporate website and two Raspberry Pi products now running in the field. Comfortable owning a feature from requirement through release and post-release support.

SKILLS

Languages:	Python, Dart, JavaScript (ES6+), PHP, SQL, Java, C
Mobile:	Flutter, Clean Architecture, Firebase (Auth, FCM, Crashlytics), Google Play Release Management
Backend & APIs:	FastAPI, Node.js, Express, REST API Design, SQLAlchemy 2, Alembic, Pydantic, JWT Auth
Frontend:	React 18, React Router, HTML5, CSS3, Tailwind CSS, GSAP, Framer Motion, Responsive Design
Databases:	PostgreSQL, SQLite, MongoDB, Schema Design, Migrations, CRUD Operations, Stored Procedures
Cloud & DevOps:	Azure (App Service, Container Registry, Key Vault), Docker, GitHub Actions CI/CD, Apache Server
Practices:	Git, Web Hosting & Domain Setup, Root Cause Analysis, Manual Testing, Agile Delivery, ITSM

EXPERIENCE

Software Developer · Aashman Technicals Pvt. Ltd.

Jan 2024 – Present | Pune, Maharashtra | Started as Software Development Intern

- Own software delivery end to end for the company's products — requirements, architecture, implementation, release, and post-release support — across Flutter mobile, React web, and Python and Node.js backends.
- Took TRUUNA from first commit to a live Google Play listing across 13 production releases and 8 delivery phases, clearing Google production review on every submission.
- Run hosting and deployment for internal and customer-facing systems, from Apache shared hosting and domain configuration to Azure App Service with GitHub Actions CI/CD and Key Vault secrets across staging and production.
- Designed a service-to-service integration contract that lets the company's ERP/CRM pull app registrations, bookings, payment submissions, and a user activity audit trail over token-authenticated HTTP, with both databases kept fully isolated.
- Perform root cause analysis on hardware-software integration issues across Raspberry Pi and Bluetooth deployments, cutting downtime and documenting fixes and incident history within defined SOPs.

PROJECTS

TRUUNA — Android App (Live on Google Play)

Flutter, Dart, Python, FastAPI, PostgreSQL, Firebase, Azure | Google Play: [in.aashman.truuna](#)

- Built and shipped a production Flutter Android app to the Google Play Store covering onboarding, phone-OTP authentication, product catalog, cart and booking, quote generation, advance payments, and order timeline.
- Developed the Python 3.12 FastAPI backend (SQLAlchemy 2, Alembic, Postgres 16) with 20+ REST endpoints, Firebase Phone Auth, FCM push notifications, and server-generated PDF quotes.
- Deployed the backend to Azure App Service via Container Registry with a GitHub Actions workflow, cloud Postgres, and Key Vault secret management across staging and production environments.
- Hardened the release build for Play Store compliance — target API 36, per-environment flavors, Crashlytics, FLAG_SECURE on payment screens, encrypted token storage, and PII-safe logging that never records phone numbers, OTPs, or tokens.

Aashman Technicals — Corporate Website

React 18, JavaScript, PHP, CSS3, GSAP | [aashman.in](#)

- Built and deployed a 9-route React 18 SPA (17 components) with a hand-written CSS3 design system, GSAP and Framer Motion animations, and a pinch-zoom media lightbox.
- Developed a secure PHP contact API with reCAPTCHA v2 verification, per-IP rate limiting, input sanitization, email header-injection protection, and a CORS allowlist.
- Deployed to Apache shared hosting under no-Node and no-SMTP constraints using hash routing, static builds, and PHP mail() transport.

DMS — Dairy Management & POS System

React, Node.js, Express, SQLite, Python, Chart.js | Raspberry Pi

- Built a local-first dairy POS for offline Raspberry Pi deployment with product and inventory management, PDF invoicing, payments, staff records, and full audit history on SQLite.
- Added Python microservices for RFID check-in, notifications, and invoice generation, plus Chart.js dashboards and Excel backup exports.

Urja Dairy Tour — Interactive Guided Tour App

React, Framer Motion, Howler.js, Tailwind CSS, Node.js | Raspberry Pi Kiosk

- Developed a multilingual (English, Hindi, Marathi) React kiosk app delivering audio-guided plant tours with category selection, progress indicators, and full playback controls.

EDUCATION

Bachelor of Computer Application (BCA)

Mudhoji College, Phaltan | 2021 – 2024 | CGPA: 7.45

CERTIFICATIONS

Full Stack Java Development
